Partnership with Rockwell Automation

www.rockwellautomation.com

On March 2, 2009, ProLeiT and Rockwell Automation announced the conclusion of an international cooperation agreement including the development, worldwide marketing and sales of the Plant iT and brewmaxx process control systems for the Consumer Packaged Goods sector (CPG).

Both companies have agreed on the short-term completion of the project for the porting of the Plant iT process control systems for the food industry, and also brewmaxx with its specific variants for the brewing industry, to the Rockwell Automation Logix controller platform.

Specifically, this means that the process control basic functionality already available today, based on the Plant iT multi-platform, will be further developed in order to support the entire scope of Plant iT functions – up to complete order, batch and materials management. The cooperation opens new perspectives for the use of the system platforms of both companies. Each of the two partners is in a position to fulfill customer requests for first-class solutions: ProLeiT AG as a competent provider of sector-specific solutions and Rockwell Automation as a worldwide leading provider of drive, control and information solutions.

The trade show year 2009 is marked by a notable variety of major international technology shows.

drinktec

ACHEMA

Munich in late summer and the IBA in Dusseldorf in fall will be special highlights of this trade show year:

Process control technology, available on the hardware platforms of the PLC world market leaders.

As an all-in-one provider of PCS, batch and MES solutions, we ensure both horizontal – from the receiving of raw material to the delivery of the finished product – and vertical integration – including actors/sensors and even ERP systems.

Not only the Anuga FoodTec in Cologne and the Achema in Frankfurt in spring, but also the drinktec in

Process control technology is our core competence. MES as an integrated PLS functionality is our mission!

Our exhibits at the Anuga FoodTec will focus on comprehensive automation solutions for the dairy industry and soft drink production plants. As very specific variants for MES, at the Achema we will present sophisticated solutions for integrated asset management. At the drinktec, visitors at our stand will be provided with the unique opportunity of gaining information on proven energy saving concepts based on intelligent peak shaving. At the IBA, the world's most important specialist trade fair for bakers and confectioners in Dusseldorf, we will focus on dry material handling combined with Production Data Acquisition (PDA) for packaging lines. Visit us at one of the trade shows and do not hesitate to contact one of our specialists on site. We will be glad to provide you with focused and concentrated solution know-how.

GTI-process to become a certified ProLeiT System-Partner

With this agreement, the two partners aim to strengthen their market positions and achieve customer proximity based on the established Plant iT system plat-

On March 1, 2009, GTI-process and ProLeiT signed a contractual agreement for the provision of mutual technical and sales support.

form designed by ProLeiT. In the future, GTI-process will use ProLeiT systems for the entire process industry. In addition, the partners agreed on a comprehensive qualification program, including the training of GTI-process project team members for the Plant iT process control system. ProLeiT will e.g. provide comprehensive support in the fields of configuration and commissioning. GTI-process is a established company of the process industry in Germany, Austria and Switzerland and ideally complements the sector-specific portfolio of ProLeiT.

Preserving the natural values of organic products

www.andechser-molkerei.com

Premium-quality, trustworthy and healthy organic dairy products are the focus of attention of the

Scheitz dairy, located in the Bavarian town of Andechs. To continually preserve the quality of its products, Scheitz has concluded a master agreement with ProLeiT

for the modernization of control technology at its plants. The integration of new process plants will play a major role as well.

The traceability of organic products based on uniform and system-wide operation will be one of the main goals of this cooperation.
