Eckes-Granini counts on Plant iT

www.eckes-granini.de

The plant in Bröl from bird's-eye view.

Eckes-Granini Deutschland GmbH (EGD) is the leading supplier of fruit beverages in Germany. The BDE system of the bottling lines installed at the Bröl plant in the north-west of Germany have been replaced with the Line Management System (LMS) from ProLeiT. On-site implementation took just three months during the second half of 2012. At the same time, ProLeiT implemented a "small" Manufacturing Execution System (MES) for bottling orders and material master data with seamless integration in the higher-

order SAP system. Product data and production orders from all six bottling lines can now be managed transparently through a central system, thus facilitating planning and control tasks significantly. A new project is already in the pipeline for two further locations in 2013. MES will, amongst other things, be extended by the goods intake area fully linked to SAP. Furthermore, the ProLeiT process control system Plant Batch iT will be installed for fruit mixing process orders. The continuous processing of information from the SAP system, through MES to the batch system and back ensures the efficient (horizontal) management of bills of material for production and the coherent (vertical) analysis of all production information via MES or SAP.

Premium-baked goods made by Plant iT

www.freshstartbakeries.com

Fresh Start Bakeries is one of the largest global suppliers of baked goods to the foodservice and retail markets. With bakery divisions on five continents and in eleven countries worldwide Fresh Start Bakeries is known as one of the industry's leading manufacturer of premium-bakery products. Last year ProLeiT received the order to automate, at the Polish plant near Breslau, the silo plant for dosing and dough mixing for delivery to the bun-, tortilla- and croissant line via Plant Batch iT V8.20. The project covers the entire automation of the silo plant – from the silo

delivery, the production of pre-dough, yeast and saline solution, dosing of connected production lines through to the container station and CIP system. The aim was to create an integrated solution that delivers the data of the silo plant, along with the data of the production lines to the higher-level SAP system. The Plant iT LMS Line Management System is used to transmit the data via Plant iT MES to the SAP system. The project is scheduled to be completed totally this year.

New order: Wisconsin Brewing Company

The new plant in Verona, Wisconsin/USA.

The Wisconsin Brewing Company is building Wisconsin's newest craft brewery in Verona, Wisconsin/USA. The new production plant, which is currently under construction, combines old world, artisan craftsmanship and state-of-the-art brewing technology. The new brewhouse, built by GEA Process Engineering USA will be capable of producing in excess of 100,000 barrels of Wisconsin craft beer annually. End of March this year, ProLeiT received the order from GEA USA to automate the new brewhouse. Construction updates, photos and a weekly video are available at

www.WisconsinBrewingCompany.com. Or, you can follow WBC on facebook and Twitter.

The project will be realised by the Spanish subsidiary ProLeiT Iberia S.L.U. The GEA brewhouse will be automated by brewmaxx express V8.20, the compact entry-level solution for small and medium sized breweries. Commissioning is scheduled for fall this year. Besides the new brewhouse the plant also provides space for a one-barrel Pilot Brewery to develop many beers on site, as well as an event center and a gift shop, where beer brewed by Wisconsin Brewing Company will be sold as well.

ProLeiT goes Social Media

www.proleit.com

ProLeiT expanded its social media presence. In addition to LinkedIn ProLeiT is now available on the platforms facebook and Google+. Via facebook many topics, such as the latest information or the entire company history, are retrieved.

Another topic is the training and job offers section, that is also shown online. Students

and professionals can now get in touch with ProLeiT via facebook and can keep themselves updated regarding the latest recruiting events, which ProLeiT attends. Via LinkedIn the followers will be updated as well regarding the latest events, products and the general service portfolio offered by ProLeiT.

Be part of the ProLeiT community and follow us by clicking "I like".

Relaunch website & new download center

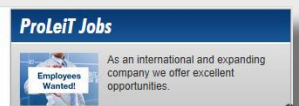

www.proleit.com

The website of the ProLeiT Group has been relaunched completely for all five languages. The result – an online presence with a modern and clear look and feel, interactive elements and an optimised usability concept. Brandnew is the virtual tour through the headquarters in Herzogenaurach, which allows the user to have an inside look into

the German office. The tour was realised by the Austrian company GPiXS 360, located in Salzburg. But the highlight of the new website is the new download section "myProLeiT". Once registered the user is able to view and download a various number of documents (e.g. brochures, success stories) in different languages.

The new download filter facilitates search queries and displays topic-related documents as file list.

„The integrated beverage plant“ – new success story at download center myProLeiT available.

Plant iT as a continuous production control system for the beverage industry – a Manufacturing Execution System (MES), that connects commercial IT with operational process control technology.
